THE SECURITY CERTIFIED PROGRAM ANNOUNCES NEW AUTHORIZED TRAINING PARTNER

*Only Security Certification Available Covering Both Core Skills
And Emerging Security Technologies.*

Geneva, IL. USA – June 27th, 2007– The Security Certified Program today announced a new Authorized Training Partner, *Focus Learning Systems, Inc.*

The Security Certified Program (SCP) develops and validates skills of information security professionals. The SCP is a two-level, vendor neutral security certification program that enables individuals to acquire skills and get certified as a Security Certified Network Professional (Level 1) or a Security Certified Network Architect (Level 2). The focus of Level One is on Defense, while Level Two concentrates on trusted communication and emerging security technologies like Public Key Infrastructure (PKI), biometrics, network forensics, and smartcards. To obtain certification within each level, students must pass at two proficiency exams demonstrating their security knowledge.

The SCP is actively joining with leading training centers around the world to bring this program to a global audience. “These training centers have made the choice to enter this growing market,” said Warren Peterson, President and CEO of The Security Certified Program. “By educating their students with the skills businesses are looking for, these organizations will be able to address the increasing need for qualified security professionals and architects.”

About Focus Learning

Focus Learning Systems has always emphasized real-world skills in all of its training programs, including our highly recognized Microsoft Bootcamps, Cisco and Security courses. The partnership formed between FLS and SCP demonstrates our continued commitment to solid, skills based training in the all-important area of Information Security. The vendor-neutral SCP program is the perfect starting point for both new and

experienced IT professionals who are eager to earn recognized security certification credentials.

FLS was one of the earliest providers of Microsoft accelerated training and continues to attract busy professionals from around the world who demand the absolute best value and quality for their training dollar. The focus at FLS has always been on developing practical skills and knowledge that people can put to use immediately in their real world environments. At the same time, we prepare our students for the rigors of certification testing. This is why we feel that the association with SCP is such a positive move. The practical skills emphasis in the Security Certified Program courses is a perfect fit with our overall training approach. We are extremely happy to add our training experience and reputation for quality to this leading security program.

About The Security Certified Program

The Security Certified Program (SCP) develops and validates skills of information security professionals. The SCP is a two-level, vendor neutral security certification program that enables individuals to acquire skills and get certified as a Security Certified Network Professional (Level One) or a Security Certified Network Architect (Level Two). The focus of Level One is on Defense, using technologies such as Firewalls, Intrusion Detection and Virtual Private Networks.

The focus of Level Two concentrates on trusted communication and emerging security technologies like Public Key Infrastructure (PKI), biometrics, and smartcards. To obtain certification within each level, students must pass at two proficiency exams demonstrating their security knowledge. For more information, please visit www.SecurityCertified.Net.
